

BULLDOGE

(\$BDOGE)

Introduction

Since 2009 Cryptocurrencies and Bitcoin in particular allow everyone in the world with a computer and internet connection to participate in its ecosystem. The whole Market Capitalization of cryptocurrencies has seen abundant growth from 2.2 Billion USD in January 2015 to 2.7 Trillion in May 2021. This is a gain of over 120000% in just 6 years. In order to make a wide community benefit, we want to create a Token for everyone.

Dogecoin

The rise of Dogecoin (\$DOGE) and the growth of popularity along with the attention the coin got for its awesome memes, shows how strong a community can grow. This creates a huge opportunity for both, its community and every individual involved. This is the inspiration and one of the groundworks that your token will be built on.

The DOGE part in BullDogeCoin (\$BDOGE) is the memecoin part! A community built on fun and memes.

The Bull

BullDogeCoin (\$BDOGE) is a community empowered BEP-20 token created for everyone who wants to participate. Even the smallest wallet will be a part of our community and can bring a benefit for everyone. By using a smart chain (BSC) with very low transaction fees we facilitate the inclusion of people who are not able to participate in more expensive ecosystems. Our goal is to create a profit for all and therefore we also aim to share profit with animals that need help. The BullDogeCoin community will have the opportunity to vote for their favorite charity that should receive our donations.

While other Tokens are just made to create memes, we aim to support continuous community projects and plan to publish onchain products, that you can use with BullDogeCoin (\$BDOGE). Creating a community that works together its way forward and towards success is one of the most valuable things for long term cryptocurrencies. You can read more about that in the “Deflationary & Products” section.

The vision

The idea to create a decentralized community with a decentralized token is the unique approach to create something that cannot be brought or held down by centralized institutions. The possibility to trade it on decentralized exchanges and the possibility to do so with very low fees on BSC (Binance Smart Chain) will make sure everyone can participate in it. Decentralized exchanges will make sure that there will be no way to stop you from participating in it whenever you want.

Decentralization

Why decentralization?

Decentralization is the backbone of all major cryptocurrencies. Throughout our whole lives we are controlled by centralized institution, whether its currencies, politics or legislation. With the development of cryptocurrencies, we are finally having an instrument that makes us able to break free from the chains of external control. One of the major goals of \$BDOGE is to bring the original idea of the internet and the world wide web back, which was decentralized in the early beginnings.

Our infrastructure is decentralized and based on smart contracts. Those contracts on the blockchain are immutable and you can be sure that once it is securely deployed you can trust the entire framework. Decentralized exchanges work as fully autonomous and decentralized applications (Dapps). This allows traders to transact without giving control over their money to a trusted central authority, as it is the case with their traditional centralized counterparts. The main benefits are increased privacy, security, and control over the funds.

Deflationary & Products

With the implementation of NFT's and a non-inflationary liquidity staking platform \$BDOGE will have use cases beyond the existence of just a token. In contrary to the money printing of all the major national banks, we believe in deflation instead of massive inflation to protect the value of your token.

A big part of existing tokens (50% of the supply) will be burned to reduce the overall amount of \$BDOGE even further. Additionally, to that we aim to add other deflationary elements to the tokenomics. These elements could include but are not limited to: locked liquidity on DEXes, deflationary elements inside smart contracts which use BullDoge like automated token repurchases & burns or deflationary fees inside those contracts.

We are also completely open for community projects and actively endorse and support them as long as they have a benefit for the whole community. The goal is that everyone can profit from the community and the community profits from every member.

Tokenomics

An equitable distribution ensures a fair project and realization.

BullDogeCoin will be distributed as follows:

Amount	Purpose
50.000.000.000	Burning Pool
10.000.000.000	Initial Liquidity
10.000.000.000	Presale
5.000.000.000	Advisors
5.000.000.000	Marketing
5.000.000.000	Developer Team
5.000.000.000	Technology
4.000.000.000	Product
3.000.000.000	Airdrop
3.000.000.000	Ecosystem Growth + Partnerships

Burning Pool

Tokens in the burning pool will be frequently burned to lower the maximum supply of BullDogeCoin (\$BDOGE).

Presale & Initial Liquidity

Presale funds & Initial Liquidity Tokens will be used on Binance Smart Chain to provide enough initial liquidity on decentralized exchanges for everyone to buy and sell.

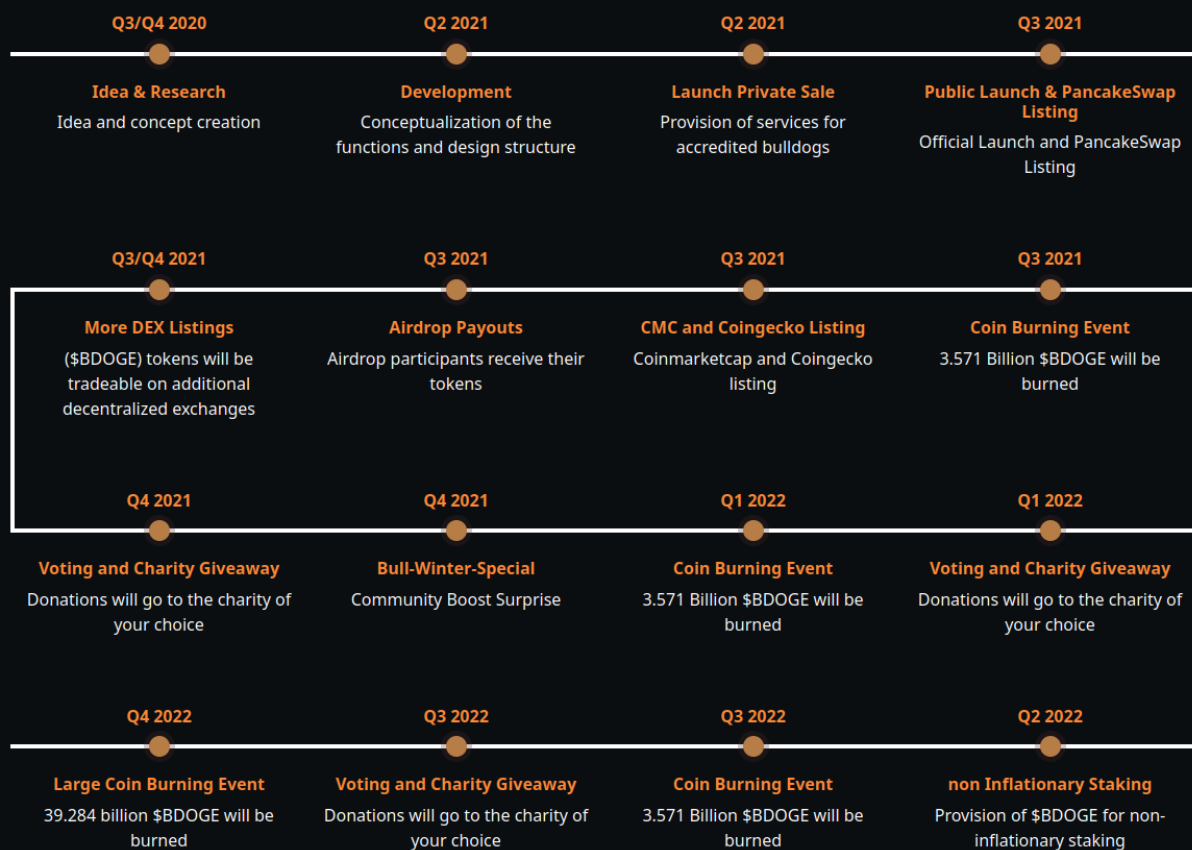

Airdrop

The Airdrop funds will be dropped to all users that are eligible and qualified for the airdrop to give everyone the possibility to participate in our new ecosystem. This also ensures the creation of a big community. The more people own \$BDOGE, the better.

Binance Smart Chain

Our blockchain of choice is the Binance Smart Chain. Besides enabling cheap transaction fees and fast transactions, we believe that the BSC will play a major role in the future and so we want to support the smart chain of the future. Another great advantage is the already existent compatibility with various wallets and Ethereum standards. \$BDOGE is a BEP-20 token. This standard is fully compliant with the already well known and proven secure ERC-20 standard from Ethereum.

Roadmap

Disclaimer

This document is not a final technical specification. It is a rough draft paper meant to outline the BullDogeCoin objectives, design and use cases of the BullDoge ecosystem.

This document does not constitute an offer to sell nor an invitation to induce an offer. Each potential purchaser is responsible to determine if the purchaser can legally purchase and/or resell \$BDOGE tokens. If cryptocurrencies such as \$BDOGE are not legal, regulated or permitted in your jurisdiction, you are not allowed to participate in the \$BDOGE community.
